Traub, D., 173  
Turek, F., 23

Unnikrishnan, A., 121

## Subject Index of Volume 28

- Absorbers
  - impinging jet, 165
- Absorption equilibria
  - of pure vapours and their binary mixtures on activated carbon, 1, 13
- Additives
  - influence of, on crust formation during drying, 133
- Bubble breakers
  - floating, in three-phase fluidized beds;
    - bubble breakage phenomena, phase holdups and mass transfer, 101
    - heat transfer and wake characteristics, 113
- Bubble column slurry reactor
  - continuous, mathematical dynamic model of, 127
- Cocurrent reactors
  - trickle bed, experimental study of, liquid–solid wetting efficiency in, 35
- Computer-aided control
  - of laboratory trickle bed reactor, 23
- Crust formation
  - during drying, influence of additives on, 133
- Cylinders
  - slow parallel motion of, in non-Newtonian media:
    - wall effect and drag coefficient, 121
- Desublimation
  - of phthalic anhydride, mathematical modelling of, 29
- Drag coefficient
  - and wall effect: slow parallel motion of cylinders in non-Newtonian media, 121
- Drying
  - influence of additives on crust formation during, 133
- Drying processes
  - selective evaporation of ternary mixture containing one nonvolatile component with regard to, 151
- Electrolyte solutions
  - pool boiling heat transfer to, 79
- Energetic optimization
  - of pneumatic transport, new approach to, 95
- Evaporation
  - selective, of ternary mixture containing one nonvolatile component with regard to drying processes, 151
- Evaporator
  - plate, investigations on heat transfer in, 143
- Fluidized beds
  - three-phase, with floating bubble breakers;
    - bubble breakage phenomena, phase holdups and mass transfer in, 101
    - heat transfer and wake characteristics in, 113
- Heat pump
  - solid–gas chemical, pilot plants, simulation, dimensioning and optimization of discontinuous and pseudo-continuous operating cycles, 55, 67
- Heat transfer
  - in plate evaporator, investigations on, 143
  - pool boiling, to electrolyte solutions, 79
  - pseudocritical, inside vertical tubes, 183
  - turbulent, and pressure drop in plain tube bundles, 173
  - and wake characteristics in three-phase fluidized beds with floating bubble breakers, 113
- Holdups
  - phase, mass transfer and bubble breakage phenomena in three-phase fluidized beds with floating bubble breakers, 101
- Jet absorbers
  - impinging, 165
- Mass transfer
  - bubble breakage phenomena and phase holdups in three-phase fluidized beds with floating bubble breakers, 101
- Non-Newtonian media
  - slow parallel motion of cylinders in: wall effect and drag coefficient, 121
- Optimization
  - energetic, of pneumatic transport, new approach to, 95
- Phase holdups
  - mass transfer and bubble breakage phenomena in three-phase fluidized beds with floating bubble breakers, 101
- Plate evaporator
  - investigations on heat transfer in, 143
- Pool boiling heat transfer
  - to electrolyte solutions, 79
- Power law fluids
  - at intermediate Reynolds numbers, motion of spheres in: unified approach, 89
- Pressure drop
  - and turbulent heat transfer in plain tube bundles, 173
- Selective evaporation
  - of ternary mixture containing one nonvolatile component with regard to drying processes, 151
- Slurry reactor
  - continuous bubble column, mathematical dynamic model of, 127

**Spheres**

motion of, in power law (viscoelastic) fluids at intermediate Reynolds numbers: unified approach, 89

**Trickle bed reactors**

cocurrent, experimental study of liquid—solid wetting efficiency in, 35  
laboratory, computer-aided control of, 23

**Tube bundles**

plain, turbulent heat transfer and pressure drop in, 173

**Tubes**

vertical, pseudocritical heat transfer inside, 183

**Turbulent heat transfer**

and pressure drop in plain tube bundles, 173

**Viscoelastic fluids**

at intermediate Reynolds numbers, motion of spheres in: unified approach, 89

**Wake characteristics**

and heat transfer in three-phase fluidized beds with floating bubble breakers, 113

**Wall effect**

and drag coefficient: slow parallel motion of cylinders in non-Newtonian media, 121

**Wetting efficiency**

liquid—solid in trickle bed cocurrent reactors, experimental studies of, 35
